SUMMARY OF JULY WATER QUALITY SAMPLING

Sampling for July 2018 occurred on the second and was considered a base flow collection. Water samples were collected at nine locations, with the exception of CC-1 due to inaccessibility from road construction. Discharge was not measured this month as a result of low water levels, where the stage measurements were at or below base flow conditions. Mesonet data shows no precipitation occurring on the second, no precipitation in the 72 hours prior to sampling, and 0.26 inches of precipitation in the 72 hours after the sampling event. The total rainfall amount in Norman for the month of July was 2.28 inches. All water level gauges were operational for the month, with the exception of LT-1 and CC-1 as a result of road construction activity.

Table 3 QA/QC Data

Quality assurance/quality control (QA/QC) of the data includes a field blank and duplicate sample from each collection event, and is qualified by the OWRB. Relative Percent Difference (RPD) of the duplicate sample can be categorized into four levels, where Level 1 likely has no QA issues and Level 4 has major QA issues, and should be used with caution.
